

Company FAQs.

BENEFITS

How does Peer Supply benefit Health Systems and Suppliers?

Peer Supply represents a scalable, standardized way of sharing data and communications across organizations to directly benefit supply chain operations, strategy, and outcomes. We expect to lower supply chain costs for the industry by incentivizing the publication and consumption of data through a data exchange. Health systems will improve resilience, sourcing, clinical integration & value analysis. Suppliers will acquire data that improves planning, marketing & customer service while publishing data one common way to industry subscribers.

COLLABORATION

Why is supply chain collaboration so important?

Supply chains directly impact care, cost, revenue, clinician satisfaction, and care team performance. Excellent healthcare requires an excellent supply chain. An excellent supply chain requires excellent data and solving problems as an industry. No matter how good you are at managing your organization's supply chain, you can't manage it alone. It requires collaboration with suppliers and other hospitals. The better we are at working together, the better healthcare delivery will be for everyone.

MEMBERSHIP

Who can join Peer Supply?

In Q1 2023 Peer Supply will be open to all providers, suppliers, distributors, GPOs, vendors, and other experts who have value to add to the community. Anyone will be able to publish information on the platform for others to access, query, subscribe, download, and/or consume. We are currently compiling a waitlist of organizations who are interested in Q1 access.

PARTNERS

Who is involved with Peer Supply?

Peer Supply is a Nashville, TN-based startup emerging out of the Hashed Health Venture Studio. Hashed Health has a team of supply chain experts, product management experts, and engineers with experience building platforms. Active design partners include >12 health systems, suppliers, and third parties who have contributed time and/or money to the commercialization of the Peer Supply platform.
